

Get exclusive access to student growth data that helps districts and teachers identify what contributes to student growth, and develop school-specific action plans to improve outcomes for every student.

10 DISTRICTS • 128 SCHOOLS • 100,000 STUDENTS

WHAT IS 3D GROWTH?

3D GROWTH measures a student’s growth rather than merely looking at individual student proficiency. This powerful alternative approach compares students across Texas with a similar history of academic achievement to make measuring performance of schools, teachers, and students more accurate and impactful.

But data by itself isn’t enough. **3D GROWTH** also integrates growth scores into training to develop campus-specific action plans with high-impact interventions for improving student performance.

“ 3D Growth gave me complex data in an easier to digest format. Numbers became action plans. ”

– Principal, Lake Travis ISD

OUR PARTNERSHIP INCLUDES:

EXCLUSIVE GROWTH DATA

at the student, teacher, and campus levels, as well as benchmark comparisons to other campuses throughout the region

3D GROWTH DATA TRAINING

for district and campus leaders to learn how to interpret 3D Growth data and data visualizations across multiple years

PROCESS MAP & ACTION PLAN COACHING

to support leadership teams during development of school-specific, data-driven action plans

Get exclusive access to student growth data that helps districts and teachers identify what contributes to student growth, and develop school-specific action plans to improve outcomes for every student.

Our Partnership Includes:

District-level data, campus-level data, teacher-level data, and student growth distribution data for the entire district

- Growth bubble charts for each campus showing academic growth and passing rates, as compared to other campuses in the region or cohort
- Visualizations indicating gaps between student groups on campuses (e.g. growth outcomes for low-income students versus non-low-income students)
- Detailed spreadsheets of growth outcomes for schools by grade and student population for 2017-18 and up to three prior years (includes teacher data)
- Exemplars (bright spots) that can be used to identify schools in the state with practices that may be worth emulating based on 'best in class' student growth outcomes

A full-day workshop for district and campus leaders

- Training to interpret 3D Growth data and visualizations with a focus on district-level and campus-level data
- Coaching on prioritizing interventions & process mapping to drive creation of campus-specific action plans, based on student growth data

***Max 18-20 campus teams of 3-5 people per workshop. Additional workshops will be scheduled for larger districts.*

A follow-up, half-day workshop for principals

- Focused on teacher-level data at each campus
- Cross-campus collaboration for handling teacher-specific & campus-specific scenarios based on teacher growth data
